

DESIGN HANDBOOK · EDITION 2026

Auralis Natura.

Modern Materia Medica.

The complete visual reference for this brand — the marks, the palette, the type, the components, the printed work and the rules that hold it together. Everything a designer or developer needs to build something new that belongs.

CONTENTS

What is *in here*.

This handbook is written to be used, not admired. Chapters 02–06 are the rules; 07–09 are how to build with them; 10–13 are production, imagery, law and the asset inventory.

01	The brand in one page	3
02	Eight decisions that define the look	4
03	The mark — seal, lockup, watermark	5
04	Colour	6
05	Typography	8
06	Layout, rhythm and tone	10
07	The component library — 22 parts	11
08	Composing a page	14
09	Writing the copy	15
10	Print production	16
11	Photography	18
12	Content guardrails — legal, not stylistic	19
13	What ships in this package	20

How to read a rule in this book. Anything stated as a number — a millimetre, a hex value, a weight — is binding and reproducible from the repository. Anything describing tone or intent is guidance you are expected to apply with judgement. Where the two conflict, the number wins.

01

THE BRAND IN ONE PAGE

PhD rigour meeting *botanical warmth*.

Auralis Natura is the holistic health coaching practice of Dr. rer. nat. Desiree Gruber in Barcelona. The brand's whole job is to make rigorous science feel warm and human — and to be unmistakably honest about what it is.

The positioning

A chemist's precision applied to everyday wellbeing. The competitive gap this brand occupies is the quadrant nobody else holds: **high scientific rigour and high human warmth at once**. Most wellness brands pick one.

The voice

A brilliant friend who happens to be a scientist.

Warm, intelligent, calm, precise. Never breathless, never mystical, never hedging behind jargon. Where evidence is weak, the copy says so — that honesty is a brand asset, not a liability.

The emotional job

Clients arrive depleted and want to **feel like themselves again**. Every page, card and report should answer that, not a feature list.

What it is never

Not medicine. Not diagnosis. Not "cream + terracotta + serif" wellness pastiche — the palette deliberately moved to warm earth tones, and the geometry to square corners, to sit outside that cliché. See chapter 12 for the guardrails that are legal rather than aesthetic.

The one-line test

Before shipping anything on this brand, read it back and ask: **would a thoughtful scientist put their name on this, and would a tired woman at the end of a long week feel welcomed by it?** It has to be both. Something that passes only the first reads cold; only the second reads like everyone else.

02

NON-NEGOTIABLES

Eight decisions that *define the look*.

These were settled by a real print run — the approved business card, design 5B “Reine Fläche”. They are not open questions, and a proposal that breaks one is a proposal to leave the brand.

- 1 **Corners are square**
`--r` and `--r-lg` are `0px`. Never add a `border-radius` anywhere — this is the single most defining structural decision in the system, and one rounded card undoes it.
- 2 **The seal is the recurring mark**
 Its signature move is the seal at **10 % opacity, bleeding off the edge** as a watermark on large quiet surfaces — hero, dark bands, the CTA card. Never as loud decoration.
- 3 **Clay is the accent, never a field**
 Role lines, small marks, and **one primary clay button per view**. Large surfaces are paper, cream or the dark brown band.
- 4 **Gold is structural, not shiny**
 Hairlines, small caps, the seal — flat `--gold` / `--gold-bright`. Mirrored or gradient “chrome” gold was reviewed and rejected as dated.
- 5 **Edges are hairlines; shadows are wide and soft**
 The printed card's frame is a 0.2 mm hairline. Never tight, dark drop shadows.
- 6 **Restraint is the premium signal**
 The business card prints at roughly **4 % ink coverage** — the paper does the work. The screen equivalent is generous whitespace and few elements per viewport. Resist filling space.
- 7 **“Desiree Gruber” never breaks across lines**
 At any breakpoint, in any language. Check it at 360 px.
- 8 **Never hyphenate**
`hyphens: none` throughout. German compounds are handled by **reducing type size**, never by splitting the word. “GE-SUNDHEITSCOACHING” is the failure this rule exists to prevent.

Where these came from. The card handoff describes itself as “the most refined expression of this brand that exists.” Where any older brand note disagrees with these eight, these win — they were measured against ink on paper.

03

LOGO, LOCKUP AND WATERMARK

The botanical *seal*.

A circular line-drawn botanical crest — the only illustrative element in the whole system, and the thing that makes a surface recognisably Auralis.

The lockup

Seal plus wordmark. Use where the brand has to introduce itself — letterheads, profile headers, the top of a document. On the website the seal alone is usually enough.

The watermark move

The brand's signature treatment: the seal scaled large, set to **10 % opacity**, and positioned so it **bleeds off the edge** of the surface. It reads as texture, not as a logo. Both the cover and the dark band of this handbook use it.

Clear space

Keep free space around the seal equal to at least **half its diameter**. It never sits inside a box, never gets a keyline, and never appears on a busy photograph.

Minimum size

16 mm in print, 48 px on screen. Below that the botanical linework fills in and it reads as a smudge — use the wordmark alone instead.

DO

- Use the supplied masters — they have clean alpha channels.
- Match the variant to the ground: gold on dark, full colour on paper.
- Let it bleed off the edge when used as a watermark.

NEVER

- Recolour, outline, rotate or add effects to the seal.
- Stretch it — it is circular and stays circular.
- Use `handover/assets/emblem_seal_360.png` : a different, busier seal that must never appear on anything customer-facing.

04

COLOUR

A warm-earth *palette*.

Cinnamon brown carries the brand; ember clay accents it; amber gold structures it. Every value below is read directly from the design system's token file — these are the live values, not a transcription.

Primary — the dark ground

`--forest`

#3D2719

Primary. Dark cinnamon brown — the brand colour.

`--forest-soft`

#5A3A22

Top of the dark-band gradient.

`--forest-deep`

#221305

Bottom of the dark-band gradient.

`--forest-2`

#8A4A2A

Cinnamon rust. Italic accents on LIGHT grounds only.

Accent — used sparingly, never as a field

`--clay`

#A8492A

THE action colour. Primary buttons, role lines, small marks.

`--clay-deep`

#8F3D22

Pressed and hover state; links on paper.

`--clay-soft`

#C47A52

Caramel. Rare — soft accents only.

`--gold`

#AD7A32

Structural gold: hairlines, small caps, rules. Flat, never shiny.

Gold, sage and ink

`--gold-bright`

#D6A84E

Amber. Emphasis text on the dark bands.

`--sage`

#927B4A

Warm olive-taupe. Quiet supporting text.

`--sage-soft`

#DAC79E

Warm sand. Secondary text on dark grounds.

`--ink`

#281F16

Body copy and headlines on light grounds.

Ink tones and papers

`--ink-soft`

#5C4A3A

Long-form body copy — softer than full ink.

`--ink-faint`

#75685A

Captions, labels, metadata.

`--paper`

#F5EEE0

The default page ground.

`--cream`

#FBF6EB

The lighter ground — alternate with paper for rhythm.

`--paper-2`

#ECE2CE

Cards and inset panels on a paper ground.

`--paper-3`

#E3D6BC

The deepest paper tone — quiet fills, oversized numerals.

Using the palette

The dark band recipe

Dark sections are not a flat fill. They are a three-stop gradient at 158°:

`--forest-soft` → `--forest` at 55 % → `--forest-deep`, with a `--gold-hair` hairline on the top edge and the seal watermark bleeding from one corner.

Emphasis, by ground

On light sections, emphasis is **ink at weight 600**. On dark bands it is **amber** `--gold-bright`. Never clay for emphasis text — clay belongs to actions.

The clay discipline

Clay is the most misused token in any system like this. The rule is simple: **one primary clay button per view**, and clay never fills an area larger than a button or a hairline rule. If a design has two clay buttons competing, one of them is not the primary action.

Structure lines

`--line` for ordinary hairlines, `--line-strong` where a table header or a swatch edge needs to hold, and `--gold-hair` where the hairline is doing brand work rather than layout work.

Contrast and accessibility

Body copy on paper uses `--ink-soft`, which clears WCAG AA comfortably at body sizes. Two combinations need care and are called out because they have caused real bugs:

COMBINATION	RULE
Faint ink on dark	Never. <code>--ink-faint</code> is a light-ground token; on the dark band use <code>--sage-soft</code> . A featured package card once shipped with an illegible price label from exactly this mistake.
Clay on forest	Insufficient contrast. On dark grounds an action button inverts to a paper or cream fill instead.
Gold as body text	Never. Gold is for hairlines, small caps and emphasis at weight 600 — not for paragraphs.

Print note. These are screen values. The printed work was produced from the same hex values with the printer converting to CMYK; the dark band on the flyer is specified as `#4A3020` rather than `--forest`, because the gradient does not survive a flat print well. See chapter 10.

05

TYPOGRAPHY

Two faces, *used with discipline.*

Fraunces carries every display and heading; Hanken Grotesk carries everything else. Both are self-hosted as woff2 and ship inside the stylesheet — nothing is fetched from a font host at runtime.

FRAUNCES · DISPLAY · WEIGHT 300 · TRACKING -0.022EM

Verstehe deinen Körper. *Verbessere deine Gesundheit nachhaltig.*

FRAUNCES · HEADING · WEIGHT 400

Dein Körper sendet Signale.

HANKEN GROTESK · BODY · WEIGHT 300-400 · LINE-HEIGHT 1.72

Auralis Natura bietet ganzheitliches Gesundheits- und Ernährungscoaching. Wir arbeiten mit dem, was messbar ist, und mit dem, was du tatsächlich in deinen Alltag einbauen kannst.

HANKEN GROTESK · LABEL · WEIGHT 600 · TRACKING 0.2EM · UPPERCASE

FUNDIERTE WISSENSCHAFT · PERSÖNLICHE BEGLEITUNG

ROLE	FAMILY	WEIGHT	NOTES
Display	Fraunces	300	Hero and section openers. Italic sets the accent clause in <code>--forest-2</code> (light) or <code>--gold-bright</code> (dark).
Heading	Fraunces	400	Card and chapter titles.
Body	Hanken Grotesk	300-400	Everything readable. Max measure ~60 characters.
Label	Hanken Grotesk	600	Kickers and small caps. The <code>--font-mono</code> token deliberately resolves to Hanken, not a monospace — the mono read as cold and robotic.

The typographic rules that matter most

- 1 Never hyphenate**
Set `hyphens: none` and leave it. German compounds — *Gesundheitscoaching*, *Frauengesundheit* — are handled by reducing the type size until the word fits, never by breaking it.
- 2 The founder's name never breaks**
“Desiree Gruber” stays on one line at every breakpoint. Wrap it in a non-breaking span wherever it appears near a fold.
- 3 Fluid sizes, not breakpoint jumps**
Display type uses `clamp()` so it scales continuously. Check every headline at **360 px** — that is where German breaks first.
- 4 Italic is an accent, not a voice**
Fraunces italic marks the second clause of a headline or a single pulled phrase. A whole italic paragraph reads as a mistake.
- 5 Measure over size**
Body copy caps at roughly 60 characters. Widening the column is never the fix for too much text — cutting the text is.

Multilingual setting

Every customer-facing surface exists in **German, English and Spanish**. German is the master language and is always the longest — which makes it the layout constraint. Two consequences for design:

- **Design in German first.** A layout that holds in German holds in the other two. The reverse is not true, and English-first layouts routinely break when the German copy lands.
- **Headline sizes are per-language where needed.** The printed flyer sets its A6 headline at 20.5 pt in English and Spanish but **17 pt in German**. That is the rule 1 escape hatch in practice.

Where the faces come from. Both families are open-source and self-hosted in `design-system/assets/fonts/` as latin and latin-ext woff2 subsets. Hanken Grotesk is a single variable file per subset covering weights 300–700 — if you ever re-download it, dedupe the `@font-face` rules or the bundle carries the same file five times.

06

LAYOUT

Rhythm, width *and tone.*

The system has very little layout machinery on purpose: one container width, one vertical rhythm, and an alternation of grounds that paces a long page.

The container

`--maxw` is 1180px, with a fluid gutter `--gut` of `clamp(20px,5vw,64px)`. Everything centres inside it. Full-bleed surfaces — image bands, dark sections — break the container but their content does not.

Vertical rhythm

Sections carry one of two paddings: the standard `sec-pad` or the tighter `sec-pad-sm` where two related sections should read as one movement. Do not invent intermediate values.

Tone alternation

Grounds cycle **paper** → **cream** → **paper** to pace the scroll, with a **dark band** placed deliberately — **three or four times on a long page at most**. The dark band is the page's punctuation; used more often it stops landing.

Grid

Two-column splits are asymmetric (roughly 0.95 / 1.05) rather than an even half — it reads as composed rather than divided. Package cards are a fixed three columns and collapse to one below 1024 px.

The whitespace budget

The single most common way to break this brand is to fill the space. The printed card is the calibration: **roughly 4 % ink coverage**. On screen that means few elements per viewport, one idea per section, and a willingness to let a headline sit alone above a large quiet area. If a design feels sparse next to a competitor's, it is probably correct.

Utility classes that exist and are safe to reuse: `wrap` (the max-width container), `sec-pad` / `sec-pad-sm` (vertical rhythm), `u-kick` (the kicker rule), `em` (the italic accent). Never invent a class name — nothing outside the shipped stylesheet resolves.

07

THE COMPONENT LIBRARY

Twenty-two *parts*.

The real, shipped library — `@auralis/design-system`. Every component below is compiled code with a typed props contract and a written usage doc. This roster is generated from those docs, so it cannot drift from the code.

Foundations 4

Button	The one interactive element that carries an action. Everything else on an Auralis page is type, rule and photograph — so a button is loud by default, and its restraint is what makes it read as premium.
Emblem	The botanical seal — the recurring brand mark, and the only illustrative element in the system. It ships inside the stylesheet as a data URI, so it needs no image path and works offline.
Label	The small uppercase, wide-tracked line that opens a section or annotates a value. It is the design system's orientation device: it tells the reader what kind of thing is coming before they read a word of the heading.
Spark	Three dots — clay, then a slightly larger amber one, then clay again. The quietest signature in the brand, inherited from the printed documents where it separates movements of an argument.

Typography 5

Display	The largest editorial voice — Fraunces at a fluid clamp, set once per page for the hero headline. A second `Display` on a page destroys the hierarchy the first one creates.
Em	The brand's second voice: Fraunces italic, cinnamon-rust on light surfaces and amber gold on the dark bands.
Heading	Section and card headings, in Fraunces.
Signature	The founder's hand-signed sign-off that closes the About section. It converts a page of claims into a person taking responsibility for them, which is the point of the whole section.
Text	Body copy, in Hanken Grotesk.

Layout 2

Section	A full-width page section carrying the site's vertical rhythm and max-width wrap. Every block of the page is a `Section`; the page is a stack of them.
SectionHead	The standard opening of a section: kicker label, title, optional lead paragraph. Using it instead of hand-assembling `Label` + `Heading` + `Text` is what keeps every section on the page starting on the same beat.

Media 2

ImageBand	A full-bleed photographic band with an optional caption plate. Its job is to let the page breathe between two dense sections — it is white space that happens to be a photograph.
PhotoFrame	A photograph in the house frame: square corners, a soft wide shadow, and a gold hairline inset just inside the edge. It is how a person appears on an Auralis page.

Content 6

CredentialChip	One credential in the ribbon beneath the hero. Each chip leads with a glyph and states a single verifiable fact.
CredentialRibbon	The row of credential chips that sits immediately under the hero. Trust is established here, in the first screen, before any argument is made.
FaqItem	One question in the FAQ accordion. It manages its own open state.
FaqList	The accordion wrapper. It supplies the hairline rules between items and the column width that keeps answers readable.
MetaList	The credentials table: term on the left, value right-aligned, hairline between rows. Quiet and factual — and, on this site, the single most persuasive element on the page, because it is the only one that makes no argument at all.
Testimonial	A client review on the dark testimonial band: stars, the quote, then an initial avatar with name and programme.

Commerce 3

CtaCard	The closing dark card that ends the page — the final ask, with the seal watermarked behind it.
PackageCard	A pricing card — the commercial heart of the page.
PackageGrid	The row that holds `PackageCard`s — three across on desktop, stacking on mobile with equal-height alignment.

Working with the library

Import the stylesheet **once** at the app root — every component styles itself through plain CSS classes, so without it everything renders unstyled:

```
import '@auralis/design-system/styles.css';  
import { Section, Display, Em, Button } from '@auralis/design-system';
```

No provider and no context are needed. For your own layout glue, reach for the tokens via `var(--*)` rather than raw hex values.

IF YOU NEED	USE
A primary action	<code>Button variant="clay"</code> — exactly one per view.
A dark band	<code>Section tone="dark"</code> — three or four per page at most.
The pricing row	<code>PackageGrid</code> with exactly three <code>PackageCard</code> s; <code>featured</code> inverts the middle one to the dark band.
A quiet brand moment	<code>Emblem</code> in its watermark treatment.
Small caps above a heading	<code>Label</code> , or <code>SectionHead</code> when it also carries the heading. Both take <code>onDark</code> .

The stylesheet is shared with the live site. `src/styles/components.css` is the production homepage stylesheet, kept byte-identical apart from the token block. A fix made in one must be mirrored into the other in the same change, or the design system starts rendering against a stale sheet.

08

COMPOSITION

How a page *is built*.

The homepage is the reference composition. Its order is not arbitrary — it moves a stranger from recognition, through credibility, to a single free action.

#	MOVEMENT	BUILT FROM
1	Hero — the promise, in the reader's own words	Section · Display · Em · Button · seal watermark
2	Credential ribbon — earn the right to be believed, immediately	CredentialRibbon · CredentialChip
3	The problem — name what she is feeling	Section tone="dark" · Heading · Text
4	The method — four movements, plainly explained	Section · SectionHead · MetaList
5	An image band — let the page breathe	ImageBand
6	Services and pricing — three programmes, one featured	PackageGrid · PackageCard
7	The founder — a face, a voice, a signature	PhotoFrame · Signature · Emblem
8	Testimonials — real ones only	Testimonial
9	FAQ — answer the objections before they harden	FaqList · FaqItem
10	The close — one free, no-obligation call	CtaCard

Pacing rules

- Alternate paper and cream between sections.
- Never place two dark surfaces back to back.
- One idea per section. If a section needs a sub-heading to hold together, it is two sections.
- The primary CTA repeats — hero, mid-page, close — but only one is clay per viewport.

Adapting the pattern

A landing page for a single programme collapses movements 4–6 into one and keeps everything else. A corporate page swaps the pricing grid for a bespoke enquiry band. What never changes is the arc: **promise → credibility → problem → method → proof → one action**.

09

COPY

German first, *always*.

Copy on this brand is not translated. It is written in German by the founder and then re-derived into English and Spanish — a change that lands in only one language is an unfinished change.

The workflow

German is the master. English and Spanish are re-derived from it in the same change, capturing the meaning and the register rather than the sentence structure. A literal translation of German marketing copy reads stiff in both.

Register

German uses the informal *du* throughout — this is a personal practice, not an institution. Keep sentences short enough to read aloud.

Words to use

Coaching. Begleitung. Bildung. Gesundheitscoaching.
May support rather than *will fix*.

Words that are legally unavailable

Never “Ernährungsberaterin”, “Nutritionist” or “dietista-nutricionista” — a protected profession in Spain under Ley 44/2003. Never “heilt”, “cures”, “diagnose”, “treats” or “garantiert”.

Naming

The three programmes are localised, and the internal keys never change:

KEY	GERMAN	ENGLISH	SPANISH	PRICE
root	Klarheit	Clarity	Claridad	€199
bloom	Wandel	Change	Cambio	€399 · 4 weeks
flourish	Balance	Balance	Equilibrio	€899 · 12 weeks
corp	Verbindung	Connection	Conexión	Tailored

Never state a duration for the free call. It is a *Kennenlerngespräch* / introductory call / *llamada de presentación* — free and no-obligation, with **no minutes named anywhere** on a customer-facing surface. This is a standing founder decision.

10

PRINT

Ink on *paper*.

Two finished pieces define the printed brand: the business card (design 5B “Reine Fläche”) and the A5/A6 flyer in three languages. Their geometry is load-bearing and must not be “corrected”.

Flyer formats

FORMAT	TRIM	BLEED BOX	PAGE BOX	LANGUAGES
A6 (narrowed)	95 × 148 mm	101 × 154 mm	111 × 164 mm	EN · DE · ES
A5 (narrowed)	138 × 210 mm	144 × 216 mm	154 × 226 mm	EN · DE · ES

Both formats are 10 mm narrower than the DIN standard at unchanged height. This is deliberate — it moves the proportion nearer the golden ratio. It is not an error, and a printer or designer who “fixes” it back to DIN has broken the piece.

Page construction

- **Page box** — the sheet the browser prints: trim, plus 3 mm bleed on every side, plus 5 mm of margin for the crop marks.
- **Artboard** — an absolutely positioned div at `left:5mm; top:5mm`, sized to the bleed box. All artwork lives here; `overflow:hidden` clips the bleed.
- **Crop marks** — eight 0.15 mm hairlines in `#aaa39a`, drawn 1 mm outside the trim edge and 4 mm long, plus a caption strip naming language, side, trim and bleed.

The registration rule — learned the hard way. No page's geometry may depend on its content. An early version let the artboard flow, and the back side printed roughly **20 mm higher on the sheet than the front**. Every page is now a fixed page box with the artboard at a fixed offset, and the repository's CI print check (`ci/check-print.mjs`) asserts it. Keep that check in any new print piece.

Specifying a new piece

Units

Everything is specified in **millimetres and points**, never CSS pixels. Reproduce values exactly — a measure that looks “roughly 6 mm” is 6 mm.

Vertical rhythm

Built from explicit `height:*mm; flex:none` spacer divs rather than margins, so the stack cannot collapse or drift between browsers.

The dark band

Print uses a flat `#4A3020`, not the screen gradient — 46 mm tall on A6, 58 mm on A5, anchored with `margin-top:auto`.

Front-face proportions (A6 → A5)

ELEMENT	A6	A5
Top spacer	10 mm	19 mm
Seal	16 × 16 mm	24 × 24 mm
Gold rule	14 × 0.25 mm	20 × 0.25 mm
Headline	20.5 pt (DE 17 pt)	29 pt (DE 24 pt)
Lede	8.6 pt / 80 mm	11 pt / 112 mm

Sending to a printer

- Export at **300 dpi** with bleed included and crop marks on.
- Let the printer handle CMYK conversion from the supplied hex values — the palette was proofed this way.
- Choose an **uncoated or lightly textured stock**. The design is built around low ink coverage, and a gloss finish fights it.
- Ask for a physical proof before any run above a few hundred pieces. The gold hairlines are the first thing to disappear on a cheap press.

The 4 % rule

The approved business card prints at roughly **4 % ink coverage**. When a new printed piece is designed, measure it against that number. If it is dramatically heavier, the design has stopped trusting the paper — and on this brand, the paper is doing the premium work.

11

PHOTOGRAPHY

Real light, *real hands*.

The photography is documentary rather than styled: natural light, real workspaces, and the founder actually working. It is the warmth half of the brand's promise.

Portrait. Desk, daylight, direct gaze. The hero and About treatment.

In practice. A consultation in progress — credibility without a claim.

Still life. Food and botanicals, uncomposed. Used for image bands.

Direction

- Natural, soft, directional light — never flash, never a studio sweep.
- Warm neutrals that sit with the palette: wood, linen, ceramic, green leaf.
- Real spaces with real texture. Nothing looks propped.
- People are working or listening, not smiling at the lens holding a salad.

Treatment

Images are placed inside `PhotoFrame` or run full-bleed as an `ImageBand`. A hairline border, never a rounded corner, never a drop shadow. Cropping is done with `object-fit: cover` and an explicit `objectPosition` — never by distorting the frame.

Never

- **Never substitute stock imagery on this brand.** If a real photograph does not exist, ship a placeholder and flag it — the documentary quality is the point, and generic wellness stock destroys it immediately.
- No heavy filters, no duotones, no colour grading away from the natural warmth.
- No text baked into a photograph. Type sits in the layout, over a quiet area if it must overlap.

One image carries context.

`desiree-womens-health.jpg` shows the founder visibly pregnant and sits in the *Frauengesundheit* section by explicit founder decision. Do not move it into an About or motherhood context, and check with the founder before writing any copy near it.

12

CONTENT GUARDRAILS

Rules that are *law, not taste*.

These constrain every word and image produced for this business. They are not style preferences and they are never relaxed to make something punchier.

1 Coaching and education — never medical care

In Spain, *dietista-nutricionista* is a legally protected profession under **Ley 44/2003**. Position everything as holistic health coaching and education: lifestyle, habits, general nutrition education, accountability. **Never** diagnosis, treatment of disease, or prescriptive medical nutrition therapy.

2 “Dr.” means Dr. rer. nat.

An academic doctorate in bioorganic chemistry, disclosed plainly wherever the title appears. **Never imply a physician**. That honesty is itself a brand asset.

3 Complement, never replace, medical care

Refer out. Keep red-flag guidance and the emergency note — “see your doctor, call 112 in an emergency” — in every client-facing deliverable.

4 Testimonials are real, or they do not exist

Never invent, embellish or composite a review — in production, in a mockup, or in a component preview. Placeholders must be visibly labelled as such.

5 Health data is GDPR special category

Explicit consent, a lawful basis, data minimisation, EU-hosted encrypted storage, a defined retention period. Never route health details through social media, DMs or messaging apps.

6 AI is assistive and human-led

Any AI-drafted client output is reviewed, edited and approved by the founder before it reaches a client. Educational, never diagnostic.

7 Figures are directional

Market and financial numbers are estimates framed for validation — never presented as forecasts or fundraising-grade figures.

Design implication. These are not only a copywriter's problem. A layout that has no room for a disclaimer, a testimonial component with no placeholder state, or a form that collects health data without a consent field are all *design* failures. Build the space for compliance into the composition from the start.

13

ASSET INVENTORY

What ships *in this package*.

Everything referenced in this handbook travels with it. Paths are relative to the root of the ZIP.

PATH	WHAT IT IS
01-handbook/	This document, as PDF and as self-contained HTML.
02-design-system/	The built, browser-ready bundle of <code>@auralis/design-system</code> : 22 compiled components, typed props, per-component usage docs, tokens, fonts, and a preview card for every component.
03-brand-masters/	The best copies of the seal that exist — full colour at 1600 px, gold on dark, single-colour brown, the watermark variant, and the website QR code.
04-print/	The approved business card (design 5B) and the A5/A6 trilingual flyer as production artwork, plus their handoff notes and the CI print check.
05-fonts/	Fraunces and Hanken Grotesk as self-hosted woff2, latin and latin-ext, with the <code>@font-face</code> CSS.
06-photography/	The real photography library — portraits, consultation, still life, certificates.
07-website/	The live homepage as a single HTML file — the canonical, shipped expression of everything in this handbook.

Using the design system

02-design-system/ is the format Claude Design consumes directly: `_ds_bundle.js` exposes every component on `window.AuralisNatura`, `styles.css` carries the whole style closure including the self-hosted fonts, and each component ships a `.d.ts` contract, a `.prompt.md` usage reference and an `.html` preview card. Upload its contents at the project root.

One last thing

This brand's premium quality does not come from anything expensive. It comes from **restraint, hairlines, real photography and honest words** — a small number of decisions applied without exception. When in doubt about something this handbook does not cover, choose the quieter option.

auralisnatura.com

Dr. rer. nat. Desiree Gruber · Holistic Health · Barcelona · office@auralisnatura.com
