

AURALIS NATURA · HOLISTIC HEALTH

The Customer Journey Setup Guide

Everything you need to run the full client journey — from the first booking to the invoice — on your MacBook. Built for one founder, a few protected hours a week, and a hard human-approval gate.

macOS edition · bilingual DE/EN templates · June 2026

1 · What you're setting up

A premium, mostly-automated practice where the software does the busywork and you do only the two things that need a human: the conversation and the judgement.

The journey has **11 steps**. Only **two are manual** (the discovery call and the report walk-through) and **one is your approval gate** (you review and edit every report before it goes out). The other eight run themselves.

#	STEP	WHO	TOOL
1	Visitor lands on the website	AUTO	auralisnatura.com
2	Books the free 25-min call	AUTO	Cal.com
3	Discovery call (25 min)	MANUAL	Google Meet
4	Client accepts & pays (the trigger)	AUTO	Stripe / Cal.com
5	Onboarding fans out	AUTO	Make
6	Secure intake + consent + red-flag screen	AUTO	Tally
7	AI drafts the 6-section report	AUTO	Claude
8	You review, edit & approve	★ APPROVE	Claude + report template
9	Render the premium PDF	AUTO	report template → PDF
10	Deliver & discuss	MANUAL	Email + video
11	Invoice + receipt, then review request	AUTO	Stripe + Make

The golden rule: nothing reaches a client without your approval (step 8). This is hard-wired into the process and is both an ethical and a legal safeguard — you are a holistic-health *coach/educator*, not a physician.

2 · Before you start — accounts to create

Create these free accounts first (all have free tiers; upgrade only when you hit a real limit). Use your `team@auralisnatura.com` address for all of them.

TOOL	USED FOR	FREE TIER?
Cal.com	Booking + Stripe payment at booking	Yes

TOOL	USED FOR	FREE TIER?
Stripe	Payments & invoices	Yes (per-transaction fee)
Tally	Intake form (EU, GDPR-friendly)	Yes
Make	Connects everything (EU-hosted)	Yes
Claude (claude.ai)	Drafts the report (you approve)	Paid plan recommended
Google Workspace	Calendar + Meet + email	Existing
Quaderno (<i>optional</i>) / your gestor	Spanish IVA-correct invoices	Paid / via gestor

Choose EU data residency wherever offered (Cal.com, Tally, Make are all EU-friendly). Intake answers are **special-category health data** under GDPR — treat them with the highest care.

3 · Install the kit on your MacBook

1. Copy the whole `customer-journey-kit` folder into your **Documents** (e.g. `~/Documents/Auralis/customer-journey-kit`). Keep the sub-folders together — the templates load the brand seal from `assets/`.
2. Install **Google Chrome** (the templates print to PDF most reliably from Chrome).
google.com/chrome
3. Open any template by double-clicking it — it opens in your browser. Nothing to install, no code to run.

What's in the kit

- `templates/report-EN.html` · `report-DE.html` — the client report (fill in → print to PDF)
- `templates/invoice-EN.html` · `invoice-DE.html` — the invoice (backup / manual)
- `templates/emails-EN.md` · `emails-DE.md` — every email, ready to paste
- `claude/report-engine-system-prompt.md` — the AI instructions
- `claude/intake-questions-EN.md` · `intake-questions-DE.md` — the Tally form
- `setup-guide/` — this guide

4 · Step 1–2 · Booking & payment (Cal.com + Stripe)

1. In **Stripe**: finish account activation (business details, your IBAN). Note: never share your secret key (`sk_...`) with anyone.
2. In **Cal.com**: connect Stripe (Settings → Apps → Stripe → Connect).
3. Create the event types:
 - **Free discovery call** — 25 min, no payment, Google Meet location.
 - **The Root Session €198, The Bloom €398, The Flourishing** (starts with a free intro call) — for paid events, turn on “*Requires payment*” so Stripe collects at booking (this cuts no-shows dramatically).
4. Brand the widget with the Auralis colours: espresso `#3D2719` , clay `#A8492A` , cream `#FBF6EB` .
5. Send me (or paste into the site) the **event links** so every “Book a free call” button on the website points to the live calendar.

On the website the booking buttons are already wired to a Google Calendar appointment link as a stand-in. Once your Cal.com links are ready, they replace that in one step.

5 · Step 6 · Intake form (Tally)

1. In **Tally**, create a new form and add the questions from `claude/intake-questions-EN.md` (and a German version from `intake-questions-DE.md` — or one form with both).
2. Keep the **red-flag tick-list** and the two **required consent** checkboxes exactly as written — they are your safety + GDPR layer. Link your Privacy Policy on the consent question.
3. Tally → Integrations → **Webhook**: this is how a submission starts the automation (you'll paste the Make webhook URL here in the next step).
4. Copy the public form URL — it goes in the welcome email.

6 · Step 5 + 11 · The automation glue (Make)

Make is the conductor. You build one “scenario” (a visual flow) once; then it runs forever.

The onboarding scenario

Trigger: Stripe payment succeeded (or Cal.com booking paid) →

then: send the welcome email (with the Tally intake link) · create a client row in your records · book the report session.

The report scenario

Trigger: Tally submission → send the intake to the Claude “Auralis Report Engine” → return the draft to **you** (email/Notion). *It stops here — at your approval gate. It never sends anything to the client.*

The money + loop scenario

Trigger: you mark “delivered” → Stripe invoice/receipt → (after a few days) the review-request email.

1. In Make, create a scenario, add the **Webhook** module, copy its URL, and paste it into Tally (and/or Stripe/Cal.com) as above.
2. Add the email module (connect Gmail), the Claude module (paste your Anthropic API key into Make's secure field — it stays in Make, not in any file), and a “records” module (Google Sheets or Notion).
3. **Minimise PII:** where possible pass links and record IDs between tools, not raw health details.

Start simpler if you like. You can run the whole journey manually first (you paste intake into Claude yourself, send emails yourself) and add Make scenarios one at a time as each step becomes a bottleneck. The kit works either way.

7 · Step 7 · The AI report engine (Claude)

1. In Claude (claude.ai) create a **Project** named “Auralis Report Engine”.
2. Open `claude/report-engine-system-prompt.md`, copy the text between the lines, and paste it into the Project's **Instructions**.
3. In Settings, turn **off** any “use my data for training” option.
4. Per client: start a new chat in the Project and paste the intake with: *“Here is the client's intake — please draft the report:”*

8 · Step 8–9 · Your approval + the premium PDF

This is the heart of the practice and the one step that is always yours.

1. Read Claude's draft. Edit anything — tone, accuracy, safety. If the intake shows a red flag, make sure the report opens by recommending a doctor.
2. Open `templates/report-EN.html` (or `report-DE.html`) in Chrome.
3. **Click any dashed box** and paste your approved text. Fill the client name, date, and the six sections.
4. Press **⌘P** → Destination **“Save as PDF”** → open *More settings* → turn **ON “Background graphics”** (critical, or the colours won't print) → Margins “Default” → **Save**.
5. Reopen the fresh template for the next client (your edits live only in the tab).

The grey instructions box and dashed outlines never appear in the PDF — only the clean report does.

9 · Step 10 · Deliver & discuss

1. Email the PDF personally — use template **3** in `emails-EN/DE.md`.
2. Walk through it together on the booked video session. The report is the script; the session is the warmth.

10 · Step 11 · Invoice (Stripe) + the template

1. **Preferred:** Stripe creates the invoice/receipt automatically on payment. For Spanish IVA-correct invoices, connect **Quaderno** or hand Stripe data to your **gestor**.
2. **Backup / manual:** open `templates/invoice-EN.html` (or DE), click the dashed fields, fill the number, client, line item and totals, then ⌘P → Save as PDF (Background graphics ON).

Spain — confirm with your gestor: autónomo registration, the cuota, IRPF, and the **IVA (VAT) treatment** of coaching (it is *not* automatically exempt). Add your **NIF and registered address** to the invoice template's "From" block before sending any real invoice.

11 · Step 11 (loop) · The review request

A well-timed, no-pressure ask turns happy clients into the proof that fuels the next free call. Use template **5**. Add genuine reviews to the website as they arrive — **never invent reviews**.

12 · Your daily rhythm

Per new client, ~20 focused minutes of admin:

1. Take the discovery call (manual, 25 min).
2. Client pays → automation sends welcome + intake automatically.
3. Intake arrives → Claude draft lands in your inbox.
4. **You: review, edit, approve** → paste into the report template → Save as PDF (~15 min).
5. Email + walk-through session (manual).
6. Invoice + review request fire automatically.

13 · Compliance guardrails — keep these sacred

- **Coaching & education, never medical care.** No diagnosis, no treatment of disease, no prescriptive medical nutrition therapy.
- **“Dr.” = Dr. rer. nat.** (academic doctorate in chemistry), not a physician — always stated transparently.
- **Refer out.** Keep the red-flag screen and the “see your doctor / call 112” guidance in the intake and every report.
- **Human approval gate** on every client output (step 8) — non-negotiable.
- **GDPR:** EU hosting, explicit consent, data minimisation, defined retention; health data is special-category.
- **Real testimonials only.**

14 · Troubleshooting

SYMPTOM	FIX
PDF prints with white background / no colours	In the print dialog turn ON “Background graphics.”
The seal/logo is missing in a template	Keep the template inside the kit folder (it loads the seal from <code>assets/</code>).
Fonts look plain	Be online when you open the template (Google Fonts load over the web).
Automation didn't fire	Check the Make scenario is ON and the webhook URL is pasted correctly in Tally/Stripe.
Booking button shows “Coming soon”	That's the pre-launch gate on the website; it lifts when you go live.

15 · Go-live checklist

- ☐ Stripe activated (IBAN, business details)
- ☐ Cal.com event types created + Stripe connected + branded
- ☐ Booking links placed on the website
- ☐ Tally intake built (red-flag + consent) + webhook connected
- ☐ Make scenarios on (onboarding · report · money/loop)
- ☐ Claude “Auralis Report Engine” Project set up
- ☐ Invoice template completed with your NIF + address; gestor briefed on IVA
- ☐ Email templates saved in your mail tool
- ☐ One full dry-run with a test booking end-to-end
- ☐ Insurance + lawyer-reviewed terms in place

Auralis Natura — holistic health & nutrition coaching (education, not medical care). It does not diagnose, treat or replace a doctor. "Dr." = Dr. rer. nat. (academic doctorate in chemistry), not a physician or a registered "dietista-nutricionista." In an emergency call your local emergency services (Spain: 112). Personal & health data is processed under the EU GDPR. ·
