

Auralis Natura

V2 Automation — Founder Setup Guide

YOUR STEP-BY-STEP BUILD MANUAL · JUNE 2026
CONFIDENTIAL — FOR DR. RER. NAT. DESIREE GRUBER

What this guide does

Read once, top to bottom

This is your complete, click-by-click manual to set up the systems that will run Auralis Natura almost on autopilot. You build the accounts and copy a few links; **Claude wires the automation**. By the end, the only things *you* ever do per client are: **approve the report** and **run the call**. Everything else — booking, payment, onboarding, intake, PDF, emails, review requests — happens automatically.

THE BIG PICTURE

A visitor books a **free call** (Google Calendar) → after the call you send your existing **Stripe payment link** → payment triggers **Google Apps Script**, which creates the client's folder, sends the welcome + intake emails, and logs them in your **CRM sheet** → client fills the **intake form** → you draft the report with **Claude** and approve it → one click delivers the **PDF + email** → a few days later an automatic **review request** goes out.

SYSTEM	WHAT IT'S FOR	COST
Google Workspace (Starter)	Email, Drive, Forms, Calendar, Apps Script engine	Already have it
Google Apps Script	The free automation engine that ties everything together	Free
Google Calendar (Appointments)	The free 25-min discovery call booking page	Free
Stripe (Payment Links)	Taking payment for the three packages	Already set up
Claude	Drafting each client report (you approve every word)	Your plan

Compliance reminder. Everything below keeps Auralis as **holistic-health coaching & education** — **never medical care**. The intake form's red-flag screen and the "see your doctor / 112" lines stay in. Health data lives in the **EU region** (you've set this) with explicit consent.

Step-by-step setup

Do these in order. Each step says **WHERE** to do it and exactly **what** to click and type. At the end you send Claude four pieces of information.

1 Set your data region to Europe ADMIN.GOOGLE.COM

1. Go to `admin.google.com` and sign in as the admin.
2. Left menu → **Account** → **Data regions** (or search "data region" in the top bar).
3. Set the region to **Europe** and Save.

✓ **You said this is already done.** Good — this keeps client health data in the EU (GDPR).

2 Create the client Drive folders DRIVE.GOOGLE.COM

1. Open `drive.google.com`.
2. Click + **New** → **New folder**, name it exactly `Auralis – Clients`.
3. Open that folder, create a subfolder inside it named `_TEMPLATE`. (Claude will put the report template document in here later.)
4. Open the `Auralis – Clients` folder and look at the browser address bar. The **folder ID** is the long code after `/folders/`. Copy it somewhere safe.

Example. If the URL is `drive.google.com/drive/folders/1A2b3C4d5E6f7G8h`, the folder ID is `1A2b3C4d5E6f7G8h`.

3 Create the CRM tracking sheet SHEETS.GOOGLE.COM

1. Go to `sheets.google.com` → **Blank spreadsheet**.
2. Rename it (top-left) to `Auralis CRM`.
3. In **row 1**, type these column headers, one per cell (A1 through I1):

Timestamp	Name	Email	Package	Amount	Status	ClientFolder	ReportDoc	Notes
-----------	------	-------	---------	--------	--------	--------------	-----------	-------

The **Status** column will move through: `Paid` → `Intake` → `Drafting` → `Approved` → `Delivered` → `Reviewed`.

Copy the **Sheet ID** from the URL — it's the long code between `/d/` and `/edit`.

4 Build the intake form FORMS.GOOGLE.COM

1. Go to `forms.google.com` → **Blank form**. Title it `Auralis Natura – Secure Intake`.
2. Add the questions **exactly** as listed in the companion file `automation/INTAKE-FORM.md` (Sections A–D, including the red-flag screen and consent boxes). Each section there maps to a "Section" in the form (use **Add section**).
3. Top-right **Settings** tab → turn on **Collect email addresses**, **Limit to 1 response**.
4. Make the **consent** questions (Section D) **Required**.
5. Go to the **Responses** tab → **Link to Sheets** → choose your `Auralis CRM` sheet (this adds an "Intake" tab automatically).
6. Click **Send** → **link**, tick **Shorten URL**, and copy the **public form link**.

Tip. The full question wording is already written for you in `INTAKE-FORM.md` — you can copy-paste each question and option straight in.

5 Create the free-call booking page CALENDAR.GOOGLE.COM

1. Open `calendar.google.com`.
2. Click **Create** → **Appointment schedule**.
3. Title: `Free 25-min discovery call`. Set duration to **25 minutes**.
4. Set your **availability** (the protected hours you want to offer).
5. Under **Booked appointment settings**: turn **Google Meet ON** (adds a video link automatically), and add **email reminders** (e.g. 24 hours + 1 hour before).
6. Optional: add a couple of intake questions (name, what they'd like help with).
7. Save, then click **Open booking page** and copy that **booking link**.

STEP 6 · SEND THESE FOUR THINGS TO CLAUDE

1. **Calendar booking link** (from Step 5)
2. **Intake form link** (from Step 4)
3. **CRM Sheet ID** (from Step 3)
4. **"Auralis — Clients" folder ID** (from Step 2)

Just paste them into the chat. That's all Claude needs to finish the build.

What happens after you send the links

Once Claude has your four items, here's what gets wired up — you don't do any of this, but here's what to expect:

#	CLAUDE BUILDS	WHAT IT MEANS FOR YOU
1	Wires every "Book a free call" button on the website to your Calendar link	Visitors book themselves — no contact form to monitor
2	Writes & deploys the Apps Script engine	The free robot that runs onboarding, PDF & emails
3	Connects it to Stripe as a webhook	A paid invoice auto-starts the whole client flow
4	Loads the EN/DE/ES email templates	The right email sends itself at each stage
5	Gives you the Report Google Doc + Claude drafting workflow	You draft, edit & approve each report

ONE THING CLAUDE WILL ASK YOU FOR IN PHASE 2

To connect Stripe, you'll create a **webhook** in your Stripe dashboard pointing to the Apps Script URL Claude gives you. Stripe shows a **signing secret** — you paste that **into Apps Script** (never into the website or the repo). Claude will walk you through the exact clicks when we get there. **Never share a secret key that starts with sk_** — only the webhook signing secret, and only inside Apps Script.

ONCE IT'S LIVE

Your day-to-day, per client

1. **Free call.** They booked themselves; you just show up on Meet.
2. **Send payment link.** Paste your existing Stripe link for the package they chose.
3. **(Automatic)** Payment → folder created, welcome + intake emails sent, CRM row added.
4. **Draft the report.** Paste their intake answers into your Claude "Auralis Report Engine" project → review, edit, and **approve every word** → paste into the report Doc.
5. **(Automatic)** One click → PDF rendered, delivery email sent, status updated.
6. **Walk-through call.** Run the session on Meet.
7. **(Automatic)** A few days later → review-request email goes out.

That's the whole engine. Your protected hours go only to the two things that need a human: **approving reports** and **the calls**. Start with this and we automate any remaining bottleneck once you've run your first few clients.
